

SafeBite — Frontend UI Design System & Google Stitch Prompts

Purpose: Defines SafeBite's visual design system (colors, typography, spacing, layout rules) and gives copy-paste prompts for generating the UI in **Google Stitch** (Google's AI-powered UI design tool). Use this alongside `PRD.pdf`, `Architecture.md`, and `Phase.md` — build screens in the same order as `Phase.md`.

1. Design System

1.1 Brand Personality

Trustworthy, clean, health-forward, easy to scan at a glance — this is a tool people check quickly in a grocery aisle, so clarity beats decoration.

1.2 Color Palette

Token	Hex	Usage
Primary	#2ECC71	Emerald green — primary buttons, active states, brand accent
Primary Dark	#27AE60	Pressed states, primary gradients
Accent	#3498DB	Secondary actions, links, info highlights
Success	#27AE60	Health score 70–100 (Green band)
Warning	#F39C12	Health score 40–69 (Orange band)
Danger	#E74C3C	Health score 0–39 (Red band), destructive actions
Background	#F8F9FA	Screen background
Surface	#FFFFFF	Cards, sheets, modals
Text Primary	#2C3E50	Headings, body text
Text Secondary	#7F8C8D	Captions, metadata, disabled text

1.3 Typography

Style	Font	Size / Weight
Font family	Inter / Poppins / Roboto	—
Heading 1	—	24sp Bold

Style	Font	Size / Weight
Heading 2	—	20sp SemiBold
Body Large	—	16sp Regular
Body Regular	—	14sp Regular
Caption	—	12sp Regular
Button label	—	16sp SemiBold

1.4 Spacing Scale

Token	Value
Tiny	4dp
Small	8dp
Medium	16dp
Large	24dp
XLarge	32dp

1.5 Shape & Elevation

Element	Radius / Elevation
Buttons	12dp corner radius
Cards	16dp corner radius
Chips	20dp (fully rounded)
Flat surfaces	0dp elevation
Low elevation	2dp
Medium elevation	4dp
High elevation	8dp

1.6 Icons

Material Icons, Rounded variant. Standard size 24dp, large size 48dp.

1.7 Layout Principles

- Material Design 3 component set throughout.
- Portrait orientation only; phone-first (4.5"-7"), limited tablet support.
- Health score is always the most visually dominant element on any product-related screen (large colored badge/ring, not buried in text).
- Red-flag and risk information uses icon + short label chips, not paragraphs — scannable in under 3 seconds.
- Bottom navigation: Home · Search · Scan (center, large, primary color) · Saved · Profile.

1.8 Screen Inventory (build in this order — matches `Phase.md`)

1. Splash
 2. Onboarding (3 slides)
 3. Login
 4. Signup
 5. Home
 6. Scanner
 7. Product Detail
 8. Product List / Browse
 9. Brand List / Rankings
 10. Search
 11. Profile
 12. Scan History
 13. Premium / Subscription
-

2. How to Use Google Stitch for This Project

Google Stitch turns natural-language prompts into rendered UI screens plus exportable HTML/CSS (and it can hand off to Figma or Antigravity for the build stage). It works best with a **layered prompt**: a project-level context prompt once, then a focused prompt per screen, then short follow-up refinement prompts.

Workflow:

1. Paste **Prompt 0 (Global Context)** first in a new Stitch project — this locks in the design system so every screen it generates afterward stays consistent.
2. Paste **one screen prompt at a time** (Section 3), in the screen order from §1.8, matching `Phase.md`'s build order.
3. After each screen renders, use short **refinement prompts** (e.g., "make the health score badge larger and move it above the fold") rather than regenerating from scratch.

4. Once a screen looks right, export it (Figma / HTML-CSS) and hand the export to your Android/Antigravity workflow as a visual reference — Stitch output is a design reference, not the final Android layout code.
-

3. Prompts

Prompt 0 — Global Context (paste first, once per project)

Context: Design a mobile app called SafeBite for Android. It helps Indian consumers

scan packaged food barcodes and instantly see a health score and ingredient risk breakdown, so they can make safer food choices and find healthier alternatives.

Target users: health-conscious young professionals, new parents checking baby food safety, and people managing conditions like diabetes or high blood pressure. Users are often scanning quickly in a grocery store, so screens must be scannable at a glance.

Design system to use consistently across every screen I ask you to generate:

- Primary color: #2ECC71 (emerald green), primary dark #27AE60
- Accent color: #3498DB (blue) for secondary actions/links
- Status colors: Success/Green #27AE60, Warning/Orange #F39C12, Danger/Red #E74C3C
 - used specifically for health score bands (70-100 green, 40-69 orange, 0-39 red)
- Background: #F8F9FA, Surface/cards: #FFFFFF
- Text: primary #2C3E50, secondary #7F8C8D
- Typography: Inter or Poppins font family. Headings bold, body text regular, generous line height for readability
- Corner radius: 12dp buttons, 16dp cards, fully rounded chips
- Rounded Material Icons style, 24dp standard size
- Material Design 3 component language, portrait orientation, phone-sized frame
- Generous white space, clean and trustworthy tone – not cluttered, not playful/childish

Please keep this design system in mind for every subsequent screen in this project.

Prompt 1 — Splash Screen

Design the Splash screen for SafeBite. Full-bleed background in the primary green (#2ECC71), centered app logo mark and "SafeBite" wordmark in white, small tagline underneath ("Scan. Know. Choose Safe."). Minimal, appears for ~2 seconds before onboarding. No buttons or navigation elements.

Prompt 2 — Onboarding (3 slides)

Design a 3-slide onboarding flow for SafeBite, swipeable, with a "Skip" link top-right and page-indicator dots at the bottom.

Slide 1: illustration of a phone scanning a product barcode, headline "Scan Any Product Instantly", subtext about instant health scores.

Slide 2: illustration of a color-coded health score badge (green/orange/red), headline "Understand What's Inside", subtext about ingredient red flags explained simply.

Slide 3: illustration of healthier alternative products being suggested, headline "Find Safer Alternatives", subtext about swapping unhealthy products, plus a primary "Get Started" button.

Prompt 3 — Login Screen

Design the Login screen for SafeBite. Logo at top, "Welcome back" heading, email and password input fields with rounded corners, a primary green "Log In" button, a "Forgot password?" link, a divider labeled "or continue with", a Google Sign-In button and a Phone OTP option, and a bottom link "Don't have an account? Sign up".

Prompt 4 — Signup Screen

Design the Signup screen for SafeBite, visually consistent with the Login screen. Fields for name, email, phone, password, and confirm password, a checkbox for accepting Terms of Service & Privacy Policy, a primary "Create Account"

button, and
Google Sign-In / Phone OTP alternatives below a divider.

Prompt 5 — Home Screen

Design the Home screen for SafeBite. Top: greeting ("Hi Priya") and a search bar.
Below: a large, prominent circular "Scan" call-to-action button in primary green.
Below that: a horizontally scrollable category chips row (Snacks, Beverages, Dairy, Baby Food, Instant Foods, etc). Below that: a "Recently Scanned" card list showing product thumbnail, name, and a small color-coded health score badge per item.
Bottom navigation bar with 5 icons: Home, Search, Scan (center, large, elevated), Saved, Profile.

Prompt 6 — Scanner Screen

Design the barcode Scanner screen for SafeBite. Full-screen camera viewfinder with a rounded rectangular scan-frame overlay in primary green, subtle corner brackets, a short instruction text above the frame ("Align barcode within frame"), a torch/flash toggle icon top-right, a "Manual Entry" text button at the bottom, and a close (X) icon top-left. Keep the UI minimal so the camera view stays the focus.

Prompt 7 — Product Detail Screen

Design the Product Detail screen for SafeBite – this is the most important screen in the app. Top: product image, name, brand, and FSSAI license number. Directly below: a large, prominent circular health score badge (0-100) color-coded green/orange/red with the numeric score large and bold. Below that: a horizontal row of red-flag chips with small warning icons (e.g. "Palm Oil", "High Sodium", "MSG"), each colored by severity. Below that: an expandable "Nutrition Facts" table (energy, protein, carbs,

sugar, fat, sodium, fiber). Below that: a "Health Risks" tag row (Obesity, Diabetes, Hypertension). Below that: a highlighted advisory card with safe-consumption guidance text. Below that: a horizontally scrollable "Healthier Alternatives" card carousel, each card showing product image, name, and its own health score badge. At the very bottom: a sticky row of "Buy Now" buttons for Amazon, Flipkart, Blinkit, and BigBasket with their price shown, and a heart/save icon plus share icon near the product title.

Prompt 8 — Product List / Browse Screen

Design a Product List (Browse) screen for SafeBite. Top: category title and a filter icon that opens a bottom sheet (score range, no palm oil, low sugar, high protein, organic only) and a sort icon (best score, price, newest, most scanned). Below: a 2-column grid of product cards, each with product image, name, brand, and a small color-coded health score badge in the corner. Infinite-scroll style pagination at the bottom.

Prompt 9 — Brand List / Rankings Screen

Design a Brand Rankings screen for SafeBite. Top: search bar for brands and category filter chips. Below: a "Top Healthy Brands" horizontal card row (brand logo, average score badge) and a "Brands to Watch" row styled with warning-orange accents. Below that: a full vertical list of brands, each row showing brand logo, name, average score badge, and a small horizontal bar showing score distribution (excellent/good/moderate/poor segments in green/orange/red).

Prompt 10 — Search Screen

Design a Search screen for SafeBite. Top: a focused search input with a back arrow

and clear (X) button. Below: "Recent Searches" as removable chips. Below: live auto-suggestion list as the user types, each row showing a small product thumbnail, name, and brand. Empty state: a friendly illustration with "Search for any packaged food product".

Prompt 11 — Profile Screen

Design a Profile screen for SafeBite. Top: circular profile photo, name, email, and an edit icon. Below: a "Health Profile" card with toggle switches for Diabetes, High Blood Pressure, Heart Disease, and a multi-select chip row for allergies (Peanuts, Gluten, Lactose, Soy, Egg). Below: a small stats dashboard showing Total Scans, Healthy Choices Made, and Harmful Products Avoided as three stat cards. Below: a settings list (Language, Notifications, Scan History, Refer & Earn, Go Premium, Privacy, Logout) as simple list rows with icons and chevrons.

Prompt 12 — Scan History Screen

Design a Scan History screen for SafeBite. Top: a search bar and a filter row (All, Safe, Moderate, Harmful). Below: a chronological list grouped under date-section headers (Today, Yesterday, Last 7 Days, Last 30 Days, Older), each row showing product thumbnail, name, a small color-coded score badge, and scan timestamp. Include a swipe-to-delete affordance hint and a "Clear All" text link at the top-right.

Prompt 13 — Premium / Subscription Screen

Design a Premium subscription screen for SafeBite. Top: a headline "Unlock SafeBite Premium" with a short subtext. Below: a feature comparison list with checkmarks (Unlimited scans, All red flags shown, Detailed PDF reports, Family profiles up to 5,

AI shopping list, Ad-free, Priority support). Below: three pricing plan cards side by side or stacked – Monthly ₹99, Yearly ₹899 (marked "Best Value, Save 25%" with a badge), Lifetime ₹2,999 – each selectable with a radio-style highlight state. Bottom: a sticky primary "Upgrade Now" button and small text noting 7-day refund policy.

4. Refinement Prompt Patterns (use after any screen generates)

Make the health score badge larger and move it higher on the screen so it's visible without scrolling.

Increase contrast between the red-flag chips and the background so they're easier to scan at a glance.

Simplify this screen – remove [X] and give [Y] more visual weight.

Generate a dark-mode variant of this screen using the same design system.

Show me this screen's empty state / loading state / error state.

5. Handoff Notes

- Stitch output (HTML/CSS or Figma export) is a **visual reference and spec**, not final Android code — hand it to your Android/Antigravity build step (see `Phase.md` steps 1.1-1.30) to implement as native Views/Compose following the MVVM structure in `Architecture.md`.
- Keep this file updated if the design system changes — re-run Prompt 0 with the updated tokens before regenerating any screen, so everything stays visually consistent.
- Any screen involving health claims or red-flag copy must still follow the content-safety rules in `rules.md` §6, even though Stitch is only generating layout, not final copy.

This document defines SafeBite's design system and provides ready-to-use Google Stitch prompts, ordered to match the screen-build sequence in `Phase.md`.
